

CLAIMS

1. An embroidery-frame mounting structure for mounting an embroidery frame, holding an embroidering fabric in a spread-out condition, on a base frame driven relative to a tool, said embroidery-frame mounting structure comprising:

a mounting member that removably attaches said embroidery frame to the base frame at a predetermined position; and

a positioning member removably fixed to the base frame at a predetermined position,

wherein said mounting member is attached to said positioning member in such a manner that a mounted position thereof relative to the said positioning member is adjustable, so that said embroidery frame is adjustably and removably mounted on the base frame via said mounting member and said positioning member.

2. An embroidery-frame mounting structure as claimed in claim 1 wherein a structure for permitting adjustment of the mounted position of said mounting member relative to said positioning member comprises a mounted-position adjusting hole formed in said mounting member and a screw loosely engaged in the mounted-position adjusting hole, and wherein said mounting member is mounted on said positioning member by first adjusting the mounted position of said mounting member relative to said positioning member and then fastening the screw.

3. An embroidery-frame mounting structure as claimed in claim 1 wherein said positioning member is fixed to the base frame via a screw.

4. An embroidery-frame mounting structure as claimed in claim 1 wherein a structure for allowing said embroidery frame to be removably attached to said mounting member comprises a fitting structure and a magnet.
